Healthcare Operations Management

 November 16-18, 2026

Background

Operations Management is the design, operation, and improvement of the processes and systems that create and deliver the organization's products and services. It provides a scientific base for management to take timely and effective decisions to their problems.

The subject advocates on improving quality, reducing variation, and eliminating waste in an organization. Some of the important healthcare operations management techniques include Project management using PERT/CPM, Location & Layout methods, Inventory management using EOQ & ABC analysis, 5S & JIT, Predictive analytics, queueing & capacity planning, Lean Six Sigma (LSS), to name a few. Manufacturing organizations have successfully employed the programs, techniques, and tools of operations improvement for many years. Recently, leading hospitals/healthcare organizations have begun to employ the same tools.

The programme is designed to enable the participants understand and use the concepts of operations management tools & techniques in hospitals/health organizations.

Objectives

This training has been designed to enable participants to understand:

Operations management techniques which could be used in taking decisions about delivering health care of high quality.

Healthcare Project Management using PERT/CPM techniques.

Supply chain & Inventory Management in healthcare.

Predictive analytics in hospitals operations.

Queuing and capacity planning in hospitals.

Lean Six Sigma (LSS) quality management – tools & techniques.

Use of software for decision sciences & Minitab®
