COVID-19. Covid-19 wave: India's epidemic growth curve on rise, after briefly hitting the bottom

Updated - March 26, 2021 at 09:21 AM. | Ahmedabad, March 25

IHMR study reveals that watered-down restrictions, complacency triggered the latest Covid-19 upsurge

BY RUTAM V VORA

Even after India's epidemic growth curve hit the bottom in mid-February with a new case growth rate touching 0.1 per cent, a recent sudden spurt in new cases has raised questions about India's public health seriousness.
